

# Stage VI Presentation

Jabili Gadde, Nicole Kercado, Lakaylah Gage,  
Anthony Scarpa, & Claire Segal

# Needs Identified and Our Approach

- **UI:** The UI was altered to make it much more approachable
- **Security:** Usernames with password encryption were included for superusers
- **Filtering:** Made searching for a specific recording very easy
- **Organization:** Data is neatly organized and tracked within SQL tables
- **Transcripts:** Transcripts are displayed directly on the site as opposed to just a link

## Benefits

- **Security:** The front end implements a username and a password (which is encrypted) for superusers
- **Filtering:** Numerous options to search by make it easy to find a specific recording
- **Expandable:** The framework that is about to be displayed has the potential to be customized / expanded easily
- **Superuser Powers:** Superusers have the power to easily alter the database how they see fit.

## Cost

- The project was developed with the idea that it is supposed to replace the current Trentoniana implementation of the recording collection.
